# 25 Years

For more than 25 years the brand name SCALA has been a symbol for high quality medical equipment for use in a domestic environment.

SCALA blood pressure monitors check one of the most important vital parameters - blood pressure.

SCALA medical thermometers check human body temperature.

SCALA nebulizer can be used as an aid in the therapy of respiratory diseases.

Our mission was and still is to bring innovative and high-quality products to the market.

In the early stages, our activity was focused to supply different products in small quantities to some pharmacists in Germany. Gradually more and more pharmacists trusted our product portfolio and with whom we have build strong customer relationship. Today we can proudly state that many big pharmacies in Germany, as well in Austria, Netherlands, Luxembourg and Switzerland are satisfied customers of SCALA Electronic GmbH.

In addition, large and well-known white good retailers and chain stores trust the quality of our medical thermometers, blood pressure monitors and nebulizers. Our products can be found in chain stores in Germany and in many other countries around Europe.

Our veterinary thermometers are well known and high sold in wholesale veterinary stores and on-line equivalent shops.

## Vision

Already in some parts of the world every patient has the capability to communicate his medical status such as blood pressure and temperatures values from his home straight to his doctor by E-mail or APPs. This is expected to become soon a reality in many European countries. SCALA seeks to be part of this reality as vital provider of domestic electronic medical devices incorporated with easy and fast data transmission.

## Mission

Products from the brand SCALA stand for quality, innovation and reliability. Our medical thermometers and blood pressure monitors have been developed to check vital parameters suitable for use in a domestic environment. While our nebulizers support home care respiratory (aerosol) therapy.

## Products

We offer our customers a high quality and wide range of products of medical thermometers, blood pressure monitors, inhalators, and personal care appliances. Spare parts and accessories complete our product range. Our company offers four different styles of veterinary thermometers respectively from small to large animals

## Quality

Our quality assurance system is built in accordance with the requirements of the European standard EN ISO 13485 for medical products and has certified by TÜV Rheinland.

# NFC Feature In Our Products

SCALA seeks to be a vital provider of domestic electronic medical devices incorporated with easy and fast data transmission.

NFC stands for "Near Field Communication" and is another standard for wireless data transitions, such as Bluetooth or Wi-Fi. NFC enables short-range communication between compatible devices, as example between your digital thermometer and your mobile phone.

The devices using NFC must adhere to certain specifications to communicate with each other properly, for example the distance between the devices should be less than 10cm. NFC requires much less power consumption than Bluetooth and has faster connectivity.

With our specially developed devices the data measured can be transmitted to your mobile phone via NFC easy and fast. Measured data can be displayed on the mobile device with diagrams and graphs via our Oucare App, which can be more informative and clearer than the previous conventional handwritten documents.

Our Oucare App is available for iOS in App-Store and Android in Play-Store and it is free of charge to download.

## Using Oucare App

Install Oucare APP from Play-store or App store. Oucare not only collect the measured data but can also do graph for checking these data trends easily.

For Android mobile device: When the device is off, put mobile device on the NFC area, the last measured value will be read-back and show on mobile device.

For iPhone 7 or above: The iOS should be 11.0 or above. When the device is off, press the NFC icon of APP then close to the NFC area, the last measured value will be read-back and show on mobile device. Refer to the figure of NFC area of iPhone7 in the right.

### Measured values directly on the mobile device

The Oucare App can either display clearly the measured values on your mobile with diagrams and graphs or can use a voice output to read these to you.

# Digital Clinical Thermometers

6

Digital thermometers from SCALA are contact maximum thermometers. These thermometers can measure fever at different parts of the body.

You should take into consideration the following:

## 1. Oral Measurement

The oral measurement of the body temperature can be taken under the tongue, either on the right or left side. The mouth should be close during the measurement. Otherwise, the measurement result can be affected by the inhaled air. The tip of the thermometer must be in contact with the tongue tissue during the measurement process.

## 2. Rectal Measurement

A precise and safe result is obtained by rectal measurement. This method is particularly suitable for babies and children. For this kind of measurement, the thermometer is inserted 2 cm in the anus.

## 3. Measurement under the arm (axillary measurement)

This method is not so recommended. Because of the short time of measurement, the thermometer tip may not have the proper contact with the body. Thus, the clinical thermometer does not allow an adequate thermal compensation. Measurement under the arm will therefore always cause inaccuracy, which cannot happen with the other two methods of temperature measurement.

# Solar Clinical Thermometer SC 1480

7

The **SC 1480** is a fast solar clinical thermometer, i.e. the temperature measurement is displayed after approx. 10 seconds.

The SC 1480 works completely without batteries and has small solar cell integrated in the thermometer operational system that take over the power supply. Once fully charged, it can be used for up to 40 measurements without light.

# Digital Clinical Thermometer

## Classic SC 1493

with flexible tip

The **SC 1493** is a fast-maximum thermometer, the temperature measurement is displayed after approx. 10 seconds. The final measurement is indicated by a beep signal.

The SC 1493 is a very sensitive unit with a compact, accurate and durable LSI (large scale integration) unit and flexible measuring tip. The thermometer is waterproof and due to the ABS resin body presents no hazard to humans when is used in comparison with the common glass mercury thermometers.

# Digital Clinical Thermometer SC 2050

with flexible tip

The **SC 2050** digital clinical thermometer is a high quality, waterproof and non-allergic product and provide accurate body temperature measurements. The thermometer feature a gold-plated tip (sensor) that can be used by people sensitive to nickel. It is suitable for adults, children and babies. The thermometer has flexible measuring tip for easier use and gentle contact with the human skin. There are two methods of measuring the body temperature: orally and rectally.

## SC 44 flex

for children with flexible tip and animal design

The **SC 44 flex** is a fast-maximum thermometer, i.e. the temperature measurement is displayed after approx. 10 seconds. The final measurement is indicated by a beep signal.

The SC 44 flex has an integrated fever alarm. At temperatures above 37.5°C, the thermometer is producing short signal tones in succession and the LCD display flashes.

The thermometer comes within a plastic case inside the product packaging box. There are 5 designs (penguin, duck, frog, polar bear and dolphin) available to choose from.

The SC 44 flex with 3 designs (penguin, duck and frog) is sorted with 6 pieces per design in the display packaging box.

## Digital Medical Thermometers Infrared

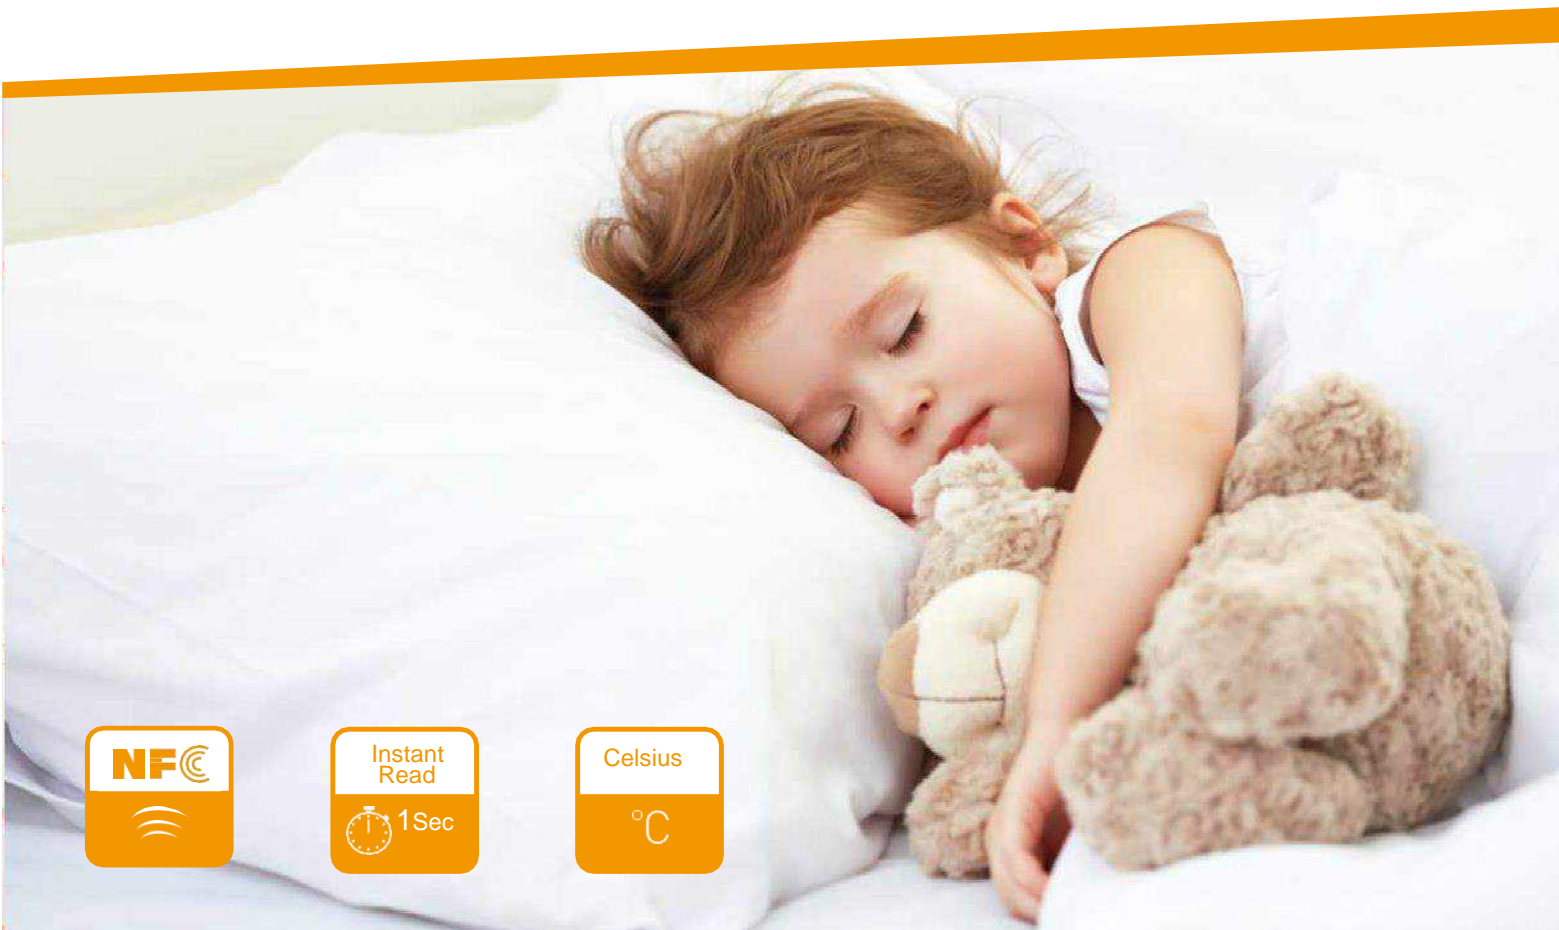

### A New Generation

The new generation of our infrared thermometers are precise and fast. This proves of how body temperature is measured today in a modern and efficient way.

The infrared thermometers SC 8360 and SC 8360 NFC measure the infrared radiation emitted by the forehead. The infrared radiation is detected by the sensor and then is evaluated and displayed on the screen.

As well the thermometers can be used for measuring the temperature of objects from 0 °C up to 100°C.

The infrared thermometers have a very fast measuring time, only in 1 sec. This is a big advantage especially for measuring the temperature of infants, sleeping or restless patients.

## SC 8280

The **SC 8280** is a new age thermometer used to measure temperature on people and on objects. This modern thermometer can be used to measure the temperature on the forehead. The emitted infrared radiation can be measured by the sensor and can be evaluated and shown on the display.

The infrared thermometer SC 8280 has a measuring time of just 1 second because of its special technique. This is a big advantage especially with infants, sleeping or restless patient.

# Basal Digital Thermometers

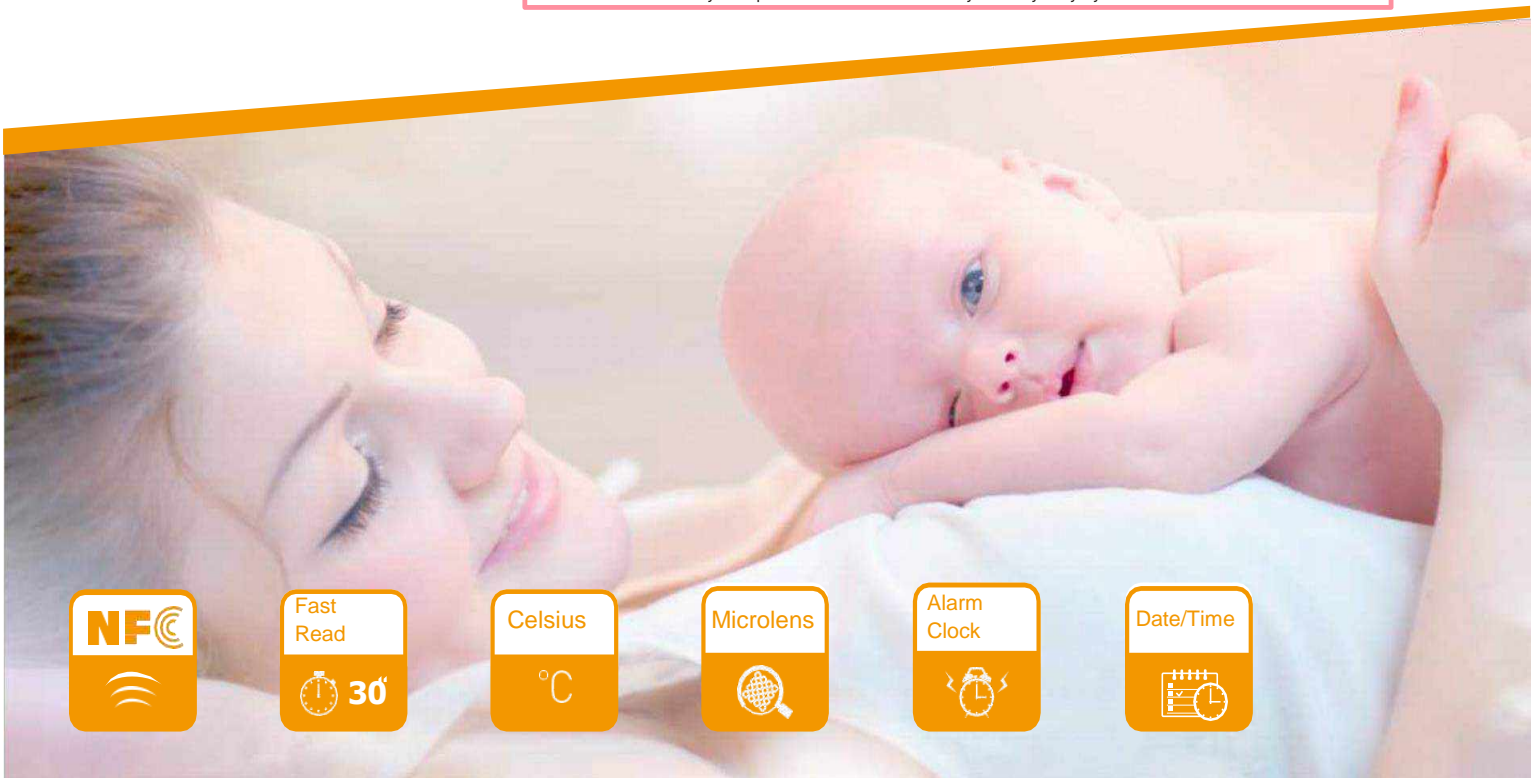

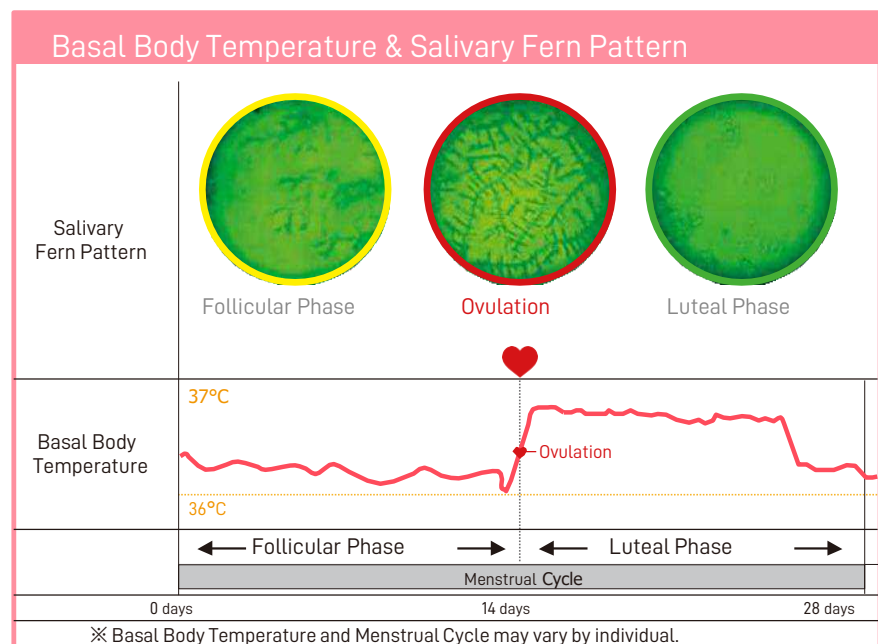

26

Basal body temperature (BBT) is the lowest body temperature attained during rest – usually during sleep. Thus, it is preferred the temperature measurement to be taken immediately after awakening and before any physical activity take place.

Monitoring BBT is one way for a woman to estimate the precise day of ovulation, which normally causes an increase of at least  $0.2^{\circ}\text{C}$  in BBT. Charting the BBT pattern through the ovulation cycle can be used as an element of fertility awareness.

Our basal thermometers are very sensitive to temperature measurement with a resolution of  $0.01^{\circ}\text{C}$  /  $0.01^{\circ}\text{F}$ .

OUcare APP via NFC (Near Field Communication). Record, track and display basal temperature TO DETERMINE THE BASAL TEMPERATURE ONLY MEASUREMENT UNDER THE TONGUE IS SUITABLE!

# Blood Pressure Monitors

## Upper Arm Blood Pressure Monitor

SCALA upper arm blood pressure monitors were developed for non-invasive (non-bloody) self-measurement of blood-pressure and pulse at adult people.

SCALA devices are using 2 different methods of measurement:  
Either Fuzzy-Logic or gentle Smart-Logic.

Fuzzy-Logic measures blood pressure during deflation.

First the systolic pressure is measured, thereafter the diastolic pressure. After the measurement the remaining pressure inside the cuff will be let off, as shown in the illustration.

In case of hypertension the cuff could be reinflated if necessary. This might be uncomfortable for the patient and leads to additional stress.

Smart-Logic already measures blood pressure during inflation.

First the diastolic pressure is measured, thereafter the systolic pressure. After the measurement the remaining pressure inside the cuff will be let off. This method of measurement is very gentle particularly for hypertensive patients.

# Blood Pressure Monitors

## Wrist Blood Pressure Monitor

32

SCALA wrist blood pressure monitors were developed for non-invasive (non-bloody) self-measurement of blood pressure.

Wrist blood pressure monitors also use different methods of measurement: the „Fuzzy-Logic“ or the gentle „Smart-Logic“ method.

Wrist blood pressure monitors are small, handy and practical. The application of the cuff is very easy and can be carried out by one person. This makes them very suitable for self-measurement. Even the accuracy of the measurement is as good as with upper arm blood pressure monitors as long as it is used according to the manual.

Even wrist monitors are mostly powered by only two (AAA or AA) batteries, they can often take as much measurements as upper-arm monitors.

Some of the SCALA devices are equipped with rechargeable batteries, which made it possible to integrate additional functions like data transfer or display of room temperature in the devices.

# Blood Pressure Monitor NFC Function

## Smart Blood Pressure Monitors

NFC (Near Field Communication) function in medical devices is becoming more popular and is being increasingly used for monitoring health records. Every patient has the capability to communicate his medical status from his home straight to his doctor via E-Mail or Apps. It is expected soon to become a reality in many countries around Europe.

Our new range of blood pressure monitors SC 6027 and SC 6750 have incorporated with NFC function. This makes it possible to transmit stored measured values to a mobile terminal, manage the data via Oucare-App and communicate the results via E-Mail or Apps to the doctor/clinic.

The blood pressure monitors are electronic medical devices used to measure human blood pressure and pulse rate utilizing non-invasive oscillometric method in domestic environment at room temperature.

After a successful measurement, the systolic and diastolic blood pressure as well as the pulse are displayed at the same time.

# Nebulizer SC 145

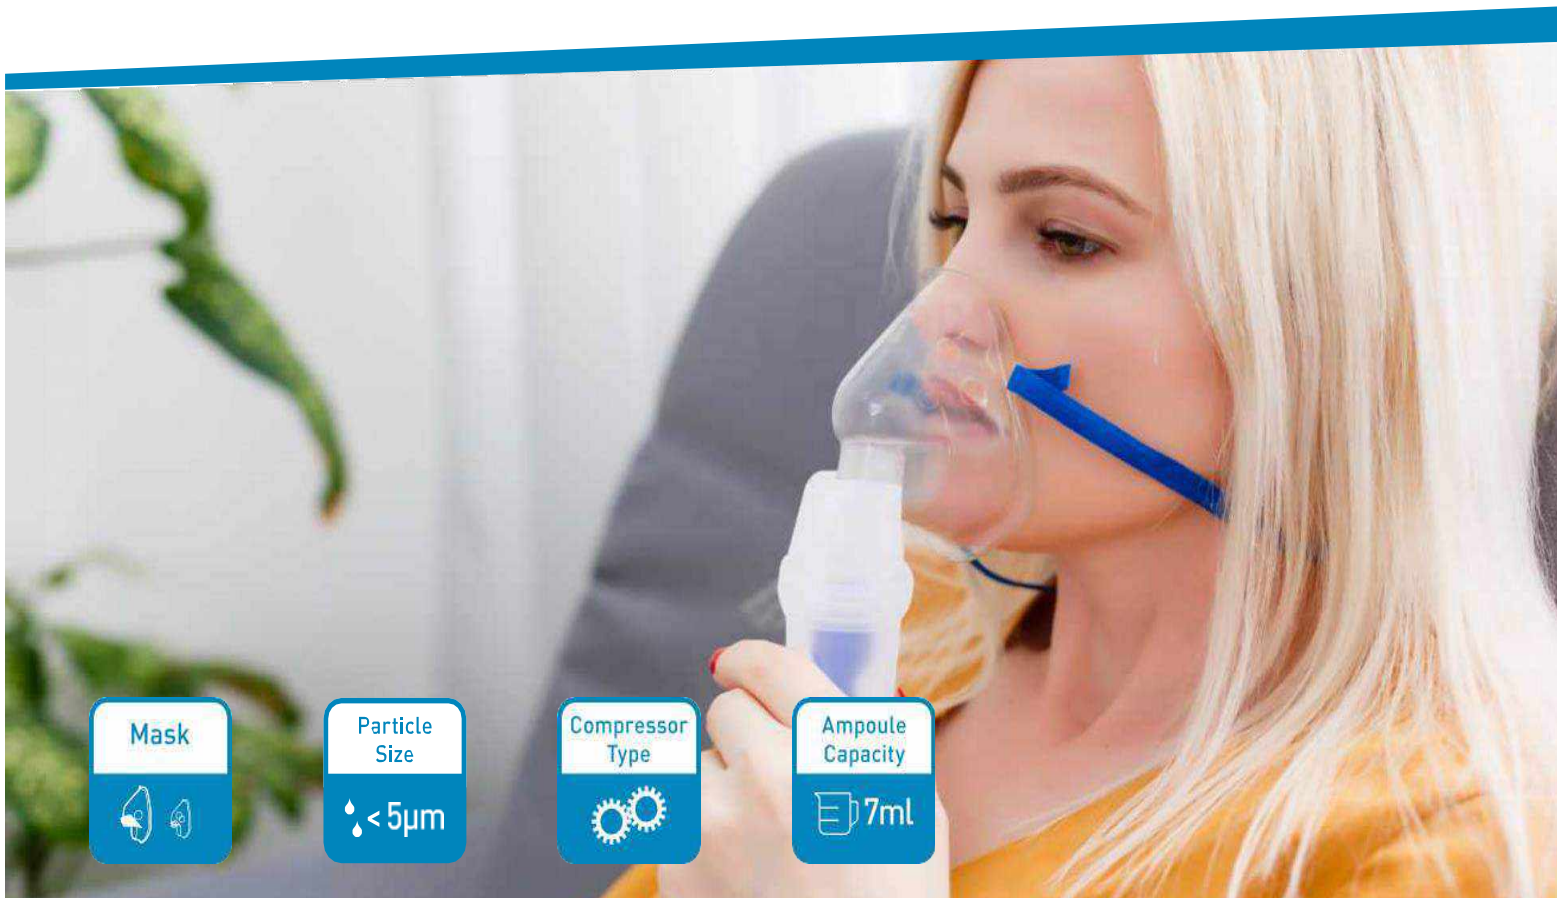

## For Aerosol Therapy

SCALA inhalation devices can be used for aerosol therapy in case of respiratory diseases, such as asthma, bronchitis or allergies.

### Compressor-Nebulizer SC 145

The nebulizer SC 145 represents with its compressor and nebulizer RF Plus an effective inhalation system for the use of aerosol medication to treat diseases at the upper and lower respiratory tract.

The nebulizer SC 145 is a compact table top device with a comprehensive range of accessories.

# Mesh-Ultrasonic-Nebulizer SC 350

43

Using the classic ultrasonic nebulizer the drug to be nebulized needs to be filled in the medication cup hanging in a water bath which is oscillations by an ultrasonic transducer. These oscillations are transmitted to the drug which will be nebulized.

For the mesh ultrasonic nebulizer there is no water bath needed. The drug is directly nebulized through a mesh disk in microscopically-small particles (aerosols) by an ultrasonic oscillator. This kind of nebulization allows to use the device in any position, even upside down.

# FLAEM Nasal Wash

## Rhino Clear® Mobile

Rechargeable nasal wash

Rhino Clear Mobile is a nasal irrigator specifically designed for flushing and treating the nasal cavities of both adults and children with saline solutions or medications for aerosol therapy. Once charged, the nasal irrigator can be transported and used without being connected to the power supply and charged using the recharger base provided. Its use must be prescribed by a doctor who has assessed the patient's general condition.

The nebuliser body has two adjacent chambers, one for holding the solution to be nebulised and the other for collecting the solution. The nasal adaptors, which come in 3 different sizes to suit the user's nostrils, are fitted onto the nebuliser body. The front part of the recharger base houses a special nasal adaptor storage compartment with protective lid. A second recess on the bottom of the base houses the power supply cord.

# Digital Bath Thermometers SC 1280

The SC 1280 is a bath thermometer suitable for safe bathing. Use this thermometer to check whether the bath water is between 36.5 °C and 38 °C. These are the water temperature limits that is safe for the human body.

With the precise and reliable bath thermometer you can be sure that the temperature in the bath is optimal. A temperature alarm indicates when the pool water is above 39°C or below 32°C.

The large, easy-to-read display shows the current temperature in degrees Celsius. The automatic switch-off function saves battery life and prevents frequent battery changes.

The tactile design with the frog and penguin design convinces with high safety standards, so that it also serves as a safe toy during baby's bath time.

CE

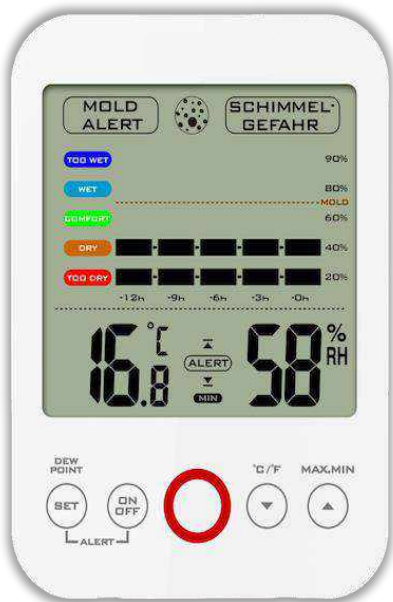

Display	Jumbo LCD
Measuring range	10~60°C
High Temperature Alarm	yes, $T \geq 39.0^{\circ}\text{C}$ , display flashes
Low temperature alarm	yes, $T \leq 32.0^{\circ}\text{C}$ , display flashes
Automatic Switch Off	30 minutes
Weight	approx. 42 g

# Digital Thermometer with Hygrometer

Digital thermo-hygrometer is an ideal measuring device for checking indoor climate conditions.

Excessive humidity encourages the growth of unwanted organisms in your living environment. Staying in moldy rooms weakens the immune system and leads to respiratory diseases, allergies and infections. Indoor air that is free of fungal and mold spores smells fresh and welcoming.

# Pillbox „Vergiss Nix“

CE

The "Vergiss Nix" pill box can help the person to organise his daily scheduled doses of medications. It allows patients in compliance with their doctor to take proper doses of their medication, to know whether or not they have taken a particular dose or if it is time for the next one.

Features of the pill box:

- Integrated quartz timer with large LCD screen (13mm character height).
- Setting up to 5 alarm times a day. Once it is programmed, the alarm will be repeated daily.
- The alarm has these choices: accoustic tone, vibration or both.
- The sceen has a backlight with blue colour making the use of the pill box easy in the dark/night.

# Digital Veterinary Thermometer

## Digital Veterinary Thermometers Large Animals

Individualized with your company logo

### Digital veterinary thermometer

- short measuring time
- Measuring range from 32.0 °C to 43.9 °C
- SC 1080 and SC 1091 for animals (dogs, sheeps, pigs, ...)
- SC 212 for bigger animals (horses, cattles, ...)

The veterinary thermometers was made by SCALA especially for temperature measurement developed in mammals.

### Holding loop

The veterinary thermometers SC 1080 and SC 1091 have a special feature. They have an eyelet for inserting a holding loop. Using the holding loop, the thermometer will not slip out of the user hands when the animal has a restless behaviour.

### 100% individually

With a larger order, you also have the option of the color of the plastic adapt to your CI color.
